EADS Defence & Security becomes

AN EADS COMPANY

Global Presence

Our main locations

EADS Test & Services unit has been in the test systems business for the past forty years and is one of the largest test systems businesses in the world.

We have operations in France, Germany, the UK, the USA, Italy and Spain, and offices in Singapore, India and the Middle East.

We lead the world in avionics test systems and during the last three years the unit has doubled in size with key acquisitions of Racal Instruments, IFR and Get Electronique, bringing together a number of key brands and a wider product portfolio and capability.

Test & Services is the world leader in avionics test systems for the Aerospace & Defence sector with 18% of the world market and can provide you with complete development/production/support test facility, customer support services and a wide range of engineering services for your products or platforms.

Our main partnerships

Test & Services key strengths are its partnerships and alliances in the Defence and Aerospace sectors.

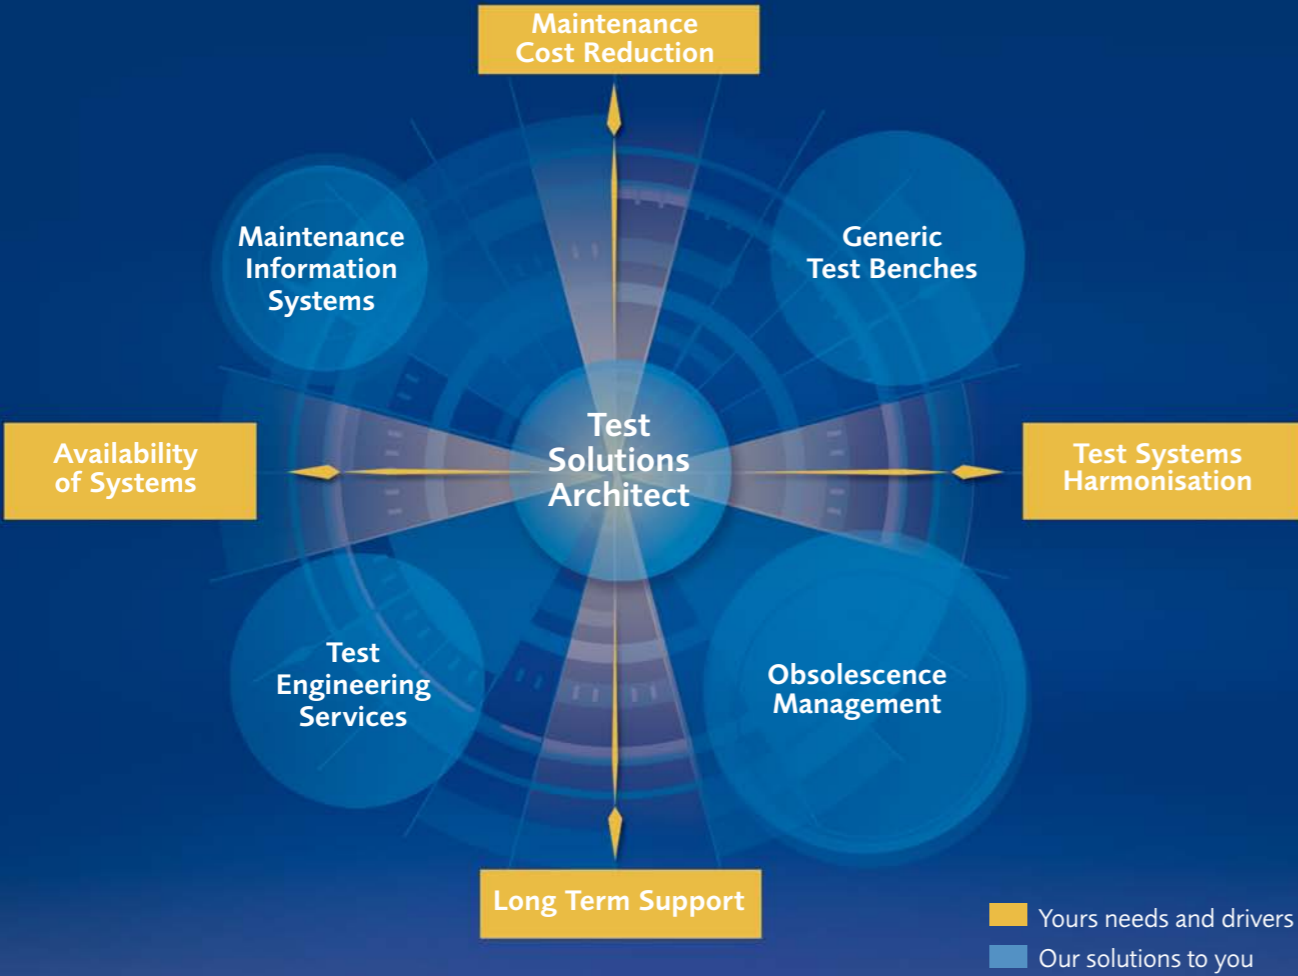

We have developed our international markets in many overseas territories and are now one of the largest test systems organisations in the world.

Test & Services has produced a large library of Test Programmes, Test Programmes that have been created in agreement and cooperation with our partners for the benefit of:

- European Defence Ministries,
- USA Department of Defence,
- More than 60 Airlines,

- Civil and Military aeronautic Maintenance and Repair Organisations (MROs),
- System, platform manufacturers and Original Equipment Manufacturers (OEMs).

Global Test Solutions

Test solutions architect

Our Customers have different needs and drivers when investing in test systems, they require:

- System availability,
- Maintenance cost reduction,
- Long term support - all of our Customers will need to maintain their test and support systems for up to 25-35 years,
- Harmonisation between development, production and support - nobody wants to continue to invest at each key stage.

To meet your needs, Test & Services produces and delivers:

- Generic test systems,
- Modular software & hardware architecture,
- Multi-OEM partnerships,
- Tailored support,
- Engineering services capabilities,
- Long term support and obsolescence management.

As one of the largest test systems providers in the world we can provide a range of services that meet the needs of our Customers, whatever they may be.

The versatility of our test systems means that they can test a multitude of equipment and systems. For example, the same airline can use a single model test bench for maintaining both its Airbus and Boeing fleets. The same is true for the Military. They can use a single model test bench for maintaining their attack helicopters, support helicopters, main battle tanks and ground air defence systems.

Large scope of competencies and technologies

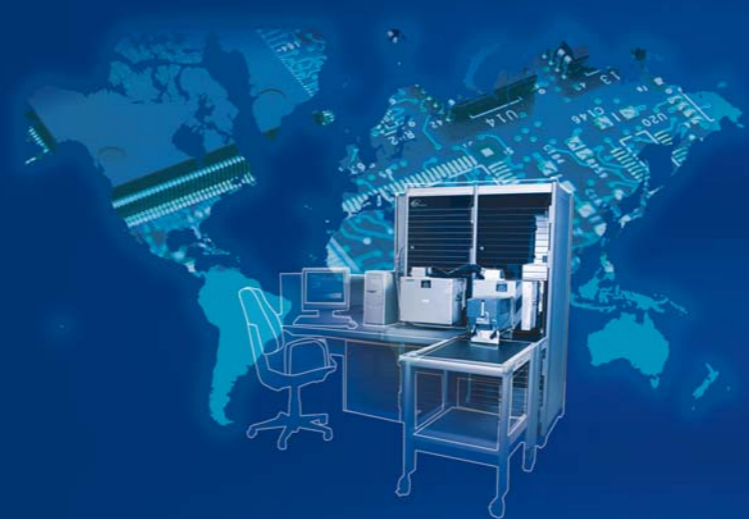

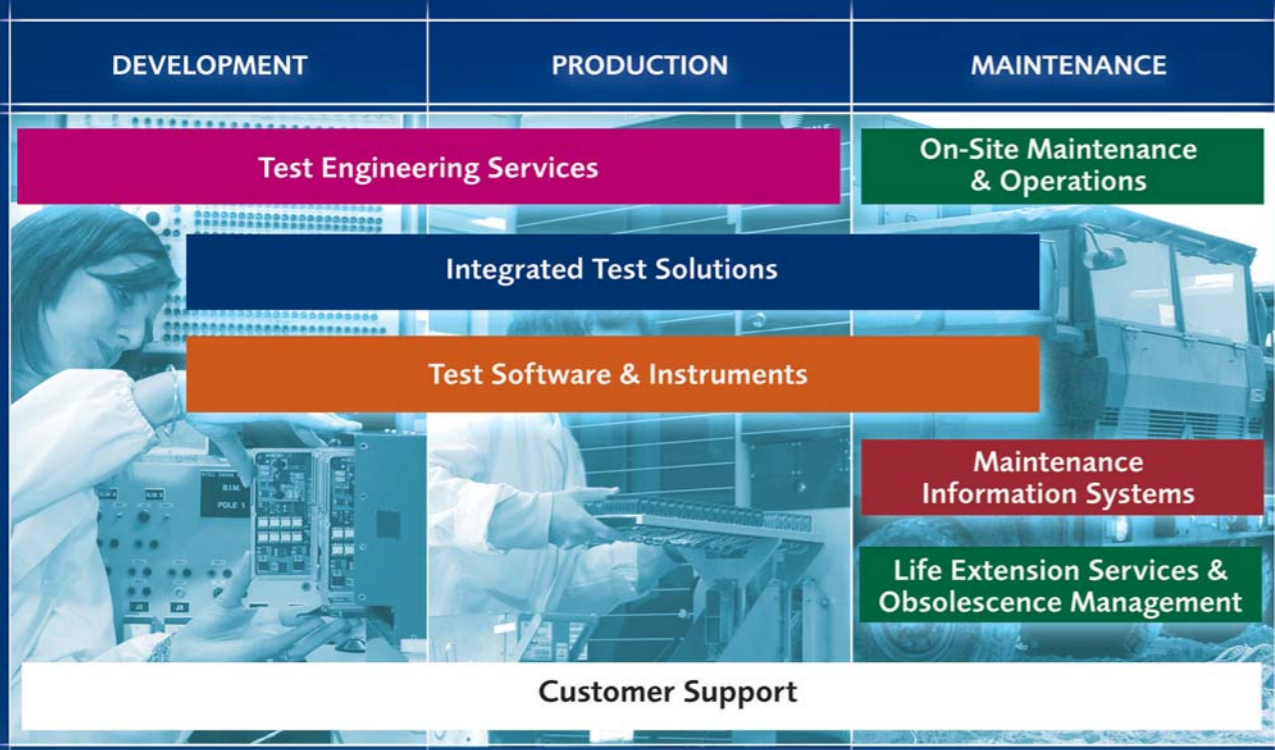

Test & Services offers a comprehensive portfolio of electronic and optronic test products ranging from analogue test and measurement instrumentation, through automatic digital test systems to complete integrated logistic support solutions and jet engine test systems.

We continue to develop sophisticated forward-deployed test and analysis equipment to support armed forces in the field, as well as offering testability analysis, training, test software development, maintenance information systems with integrated logistics and obsolescence management services.

Test & Services also provides test engineering services to support Customers with Test Programme Set (TPS) development, testability analysis consultancy services and technical assistance. We can offer this service at either our facility or on your own site.

Through-life support

Test & Services can provide you with a wide range of services and capabilities throughout the complete life cycle of your products or platforms.

- We can offer engineering services in:
- helping you determine your requirements,
 - drafting the specifications,
 - designing the test systems,
 - provision of training, etc.

We can work closely with you in defining your test system requirements in the development, production and field support stage with the provision of a complete turn-key solution.

- Alternatively if you wish to develop your own test system, we can support you with the provision of tools and equipment such as:
- instrumentation/chassis,
 - test executive software/drivers.

Throughout the life cycle of your test system, Test & Services delivers world class customer support and obsolescence management. Whether you are an Airline, OEM, MRO or Defence ministry, obsolescence management and long term support is not just important, **it is critical.**
